CURRENT PORTFOLIO OF PRODUCTS AND SERVICES

Surveillance & Security

VITL has been designing, planning and commissioning CCTV systems since 13' and our expertise is second to none. After-sales technical and maintenance support are also extended directly to the customer. From a single camera to multiple sites and also from basic setup to complex ones, VITL has gained experience by working with multiple brands.

VITL principally engaged in Sales and marketing of hi-tech CCTV and digital surveillance types of equipment. We are constantly reviewing and researching new products to make sure that VITL Stays at the forefront of the cutting edge product technology in the mass market. VITL is in its leading position when it comes to deciding which equipment to use for our clients. We do not believe working with one manufacturer, but instead we use multiple brand equipment's so that we will be able to provide the best fit to the customers.

Also, High Definition technology is fast become all-pervasive in both consumer and commercial camera systems, the potential benefits are enormous. Whatever are your requirements, whatever is your budget VITL tailors a proper solution made to your circumstances.

Access Control & Time Attendance-Solution

VITL is a professional in the field of access control offering a complete design, installation, and maintenance package that can be applied to each client requirement. Installing access control systems into your business environment is a way of protecting your property, your personnel, and your visitors. By managing and monitoring access into and from any area or building, this flexible system can ensure complete control over any site, however large or small. From simple systems consisting of access control for three or four doors, ranging up to multi-site high-security systems that include the control of thousands of card readers located at different sites within Bangladesh, VITL has experience and technical strength to such requirement. Access Control systems can be as flexible or as rigid as required, from allowing all employees access to all areas, simply monitoring their whereabouts to a comprehensive system which can be adjusted according to levels of security across employees and area. VITL .' experienced team of technicians work in conjunction with each client to ensure that the solution proposed meets the purposes of the client expectations both now and in the foreseeable future.

Some of the many benefits of installing access control in your organization are restricting walk-through traffic into secure areas and reducing the use of easily copied keys as well as making cost savings on lock replacement with electronic systems where personnel access levels can be changed in a matter of minutes. We offer a wide range of systems, incorporating proximity cards, swipe cards, smart cards and Biometric fingerprint technology, all of which can be integrated into the main access control software and hardware. As well as reducing company costs and protecting property, an access control system can provide peace of mind for personnel who can work freely in a safe environment. Also, real-time reports produced in connection with an Access Control system can aid Health and Safety monitoring, giving details of where personnel and visitors are in any site at any time for fire evacuations. With electronic entry access control systems, you can control who is granted access to your organization as well as what areas and when they can enter. The sophisticated technology of an access control system will automatically fulfill security tasks such as locking and unlocking doors as well as monitoring both valid

and invalid attempts at access and void card use. Unlike using keys, an automated access control system allows you to appoint, change or remove entry privileges immediately.

Barriers, Turnstiles & Metal Detectors

VITL can install a wide range of barriers and turnstiles either on a stand-alone basis or as part of an Integrated Security system. VITL can install a barrier system that will control vehicle or its movement, providing a standalone security system for your premises or complementing other systems such as CCTV, Access Control, etc. The key role of barriers is to prevent non-authorized access whilst providing minimum inconvenience to those that do have authorized access to the area. A proper system should allow rapid communication when any delay occurs; thereby making sure that there is no peak period congestion. The highly advanced systems that we install can stop vehicles or people at the relevant barrier and not allow entry/exit until they identify themselves via a swipe/proximity card to cross the barrier. The operator of the system (who would also be responsible for the main security system will be able to verify the person presenting the card is the same as the person held on the system database, Finally, a decision is then made on allowing entry/exit. When considering turnstile applications for clients, VITL seeks to match the clients' security requirements with equipment that offers first-class styling. As the majority of turnstiles are located in a client's main entrance of the area, the turnstiles must not detract from the aesthetics of this area. Of course, the turnstiles should also offer security and convenience with flow capacity (how many people are passing through the turnstiles) an important factor. There are numerous applications for turnstiles and not just in commercial premises. VITL has installed turnstiles in Hotels, banks, multinationals, manufacturing plants and hospital environments. The turnstiles can also be integrated into a client's main security system to provide that extra level of security and control. Beside that VITL expands its products range to Metal Detection System. We have vast experience or supplying & installing Baggage Scanner, walk Through Metal Detector, Hand Held Mel Detector and Mail Scanner, etc.

Some of the many benefits of installing access control in your organization are restricting walk-through traffic into secure areas and reducing the use of easily copied keys as well as making cost savings on lock replacement with electronic systems where personnel access levels can be changed in a matter of minutes. We offer a wide range of systems, incorporating proximity cards, swipe cards, smart cards and Biometric fingerprint technology, all of which can be integrated into the main access control software and hardware.

As well as reducing company costs and protecting property, an access control system can provide peace of mind for personnel who can work freely in a safe environment. Also, real-time reports produced in connection with an Access Control system can aid Health and Safety monitoring, giving details of where personnel and visitors are in any site at any time for fire evacuations. With electronic entry access control systems, you can control who is granted access to your organization as well as what areas and when they can enter. The sophisticated technology of an access control system will automatically fulfill security tasks such as locking and unlocking doors as well as monitoring both valid and invalid attempts at access and void card use. Unlike using keys, an automated access control system allows you to appoint, change or remove entry privileges immediately.

Fire Detection Systems & Accessories

Fire is responsible for millions of Taka of loss and damage within Bangladesh and billions worldwide, not to mention the tragic and usually avoidable loss of life which can have devastating effects on families and businesses. Many properties are required by legislation to install and maintain appropriate fire alarm systems and equipment. In the future, even buildings that are not required to have full fire systems may be required by law to have at least a basic detection system.

VITL. can design and install a total fire systems with features such as heat and smoke detection, smoke beams, audio and visual warnings, air sampling and wire-free systems, automatic door and ventilation operations, flame detectors, voice evacuation, fireman intercom together with monitoring and fire

brigade notification systems. Systems can stand along or networked and integrated with existing or VITL designed security systems, to combine and simplify monitoring and detection processes.

Fire Protection Systems

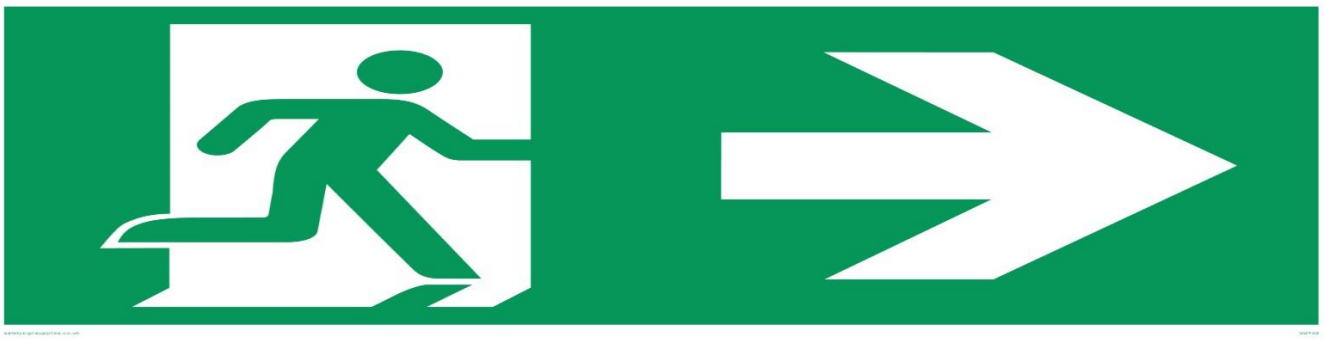

VITL is committed to providing the most comprehensive and reliable firefighting equipment and services to protect lives and properties. We assure our customers with the best from design, delivery, installation, and service. Our team of fire protection engineers, professionals, and skilled technicians are well experienced in interpreting the specification and requirements of enforcement authorities. With the understanding of these requirements, our engineers, and technicians will support installation as well as provide product training and efficient maintenance to ensure optimum performance of the system.

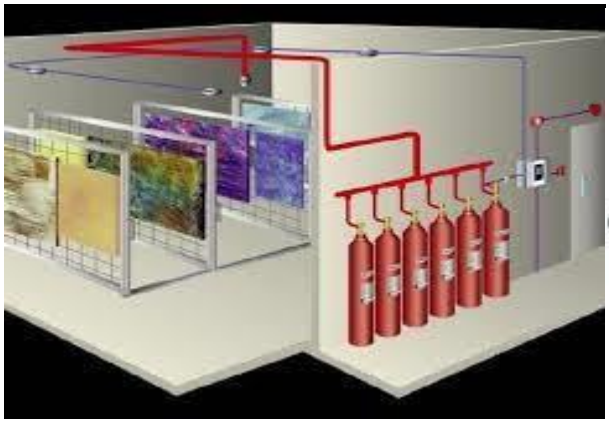

Fire Hydrant system is two types a) Wet Riser & b) Dry Riser. Fire Hydrant System is used mostly in high Rise Commercial & Residential Buildings. Sprinkler system is also used as per Fire Brigade authority's guidelines.

Miscellaneous Products

VITL offers different types of fire & security related miscellaneous product like Fire rated door, Safety & Security film, Panic exit bar, Exit Sign, Fire Blanket, Fire Extinguisher, & Gas detector, ID card printer etc.

Automatic Gas Suppression System

INERGEN is made up of natural components existing in the air we breathe. It will not cause any damage to the contents of the room or adversely affect the people inside, even in the case of a fire. Unlike some other agents, INERGEN discharges clearly without causing obstruction. By keeping escape routes visible, people can safely exit the area. Integrin is the only agent tested on humans and proven to support human life following discharge. INERGEN is the most people-friendly clean agent available.

ARGON fire system uses a pure, natural product, argon, a gas present in air that after use returns to its place in the natural atmosphere cycle. Argon is an inert gas giving excellent visibility during discharge and possessing a law specific weight allowing a uniform concentration to be held within the protected enclosure for many minutes. Argon does not damage delicate equipment; it is clean, effective and free from environmental impact. FM-200 gas is a clean, effective, environmentally friendly fire suppression agent, which is effective on all common types of fire. It is completely safe for life and property and does not adversely affect the protected contents when discharged into a room. The unique property of FM200

gas makes it the perfect choice & widely accepted to protect all types of highly valuable and critical risks. Our product meets the international certification like UL, FM and NFPA.

Intruder Alarms and Alarm Management Systems

Intruder alarm systems are the commonest form of security systems, forming the basis for the vast majority of installation. Their prevalence is indicative of their effectiveness as both a deterrent and preventative measure against intruder.

VITL uses a wide range of high quality, award-winning intruder alarm equipment. Our in-depth experience of installing quality intruder alarm systems has given us the perfect insight into providing our customers with the quality products to match your budget and your requirements. VITL provides Intruder Alarm systems to the residential markets. The systems we provide for commercial as part of an integrated system (with CCTV, Access Control systems etc.). The domestic systems applications are hitech commercial of the art systems that can work as a stand-alone security system or we install are highquality systems that provide house owners with the security they require, at a price they can afford.

Both the commercial and domestic applications can be linked to a central monitoring station that will immediately notify a local police station or your neighbor should an alarm be activated.

Guard Tour System

VITL also provide guard tour system. VITL guard tour systems are advanced and reliable solutions for patrol management. Based on 125 KHz RFID equipment's, the systems enable efficient data collection and accurate patrol recording.

Our complete systems contain guard tour readers, communication stations, software (Patrol Management System), checkpoints, guard ID tags, and other well-designed accessories. BP-2002S and BP-2002F are two of the most robust and durable guard tour readers in the market. BS series wireless communication stations facilitate data delivery from local or remote patrol sites to the managers' PCs. Moreover, patrol software provide integrated functions from patrol planning, hardware setting, to report generation.

Public Address and Conference system

As a reputed provider of state-of-the-art conference technology and Public Address System for over 3 years, VITL. Offers a unique blend of product sales and after sale support to meet and exceed your highest expectations. VITL is proudly distributing TKOKO, & CMS a brand by Honeywell, USA and Bosch, Germany.

VITL is conceited of its track record - more than 1 years old -of delivering the best in sound reinforcement and management equipment. Undoubtedly, this experience and expertise has contributed to the design and commissioning of PA and conference system as per client's requirement - advanced and modular and cost-effective. Our PAVA Systems covers Desktop System for Small shop or office, Basic system Targeted for medium to large applications like shopping malls, commercial buildings with the option of zone selection and integration with fire alarm system, Intelligent System designed for large applications like airports with the option of Touch screen PC controls for operation of network PA system.

The Conference System distributes by VITL enables more efficient and convenient meeting in terms of discussion, voting, election and simultaneous interpretation. We cover wide range of products suitable for different applications. Without compromising on quality, speakers and professional sound system provided by VITL are with lower cost of ownership. All of its acoustical products meet, or exceed, international standards. They are robust, require minimal power and are easy to install and maintain. While proud of its technical proficiency, VITL strives always to match the highest audio quality with great looking design. Our Speaker range include with loud speaker, column speaker, ceiling speaker, cabinet speaker, pendent speaker and also professional speaker, mixer and sound projectors.

Hotel Lock System

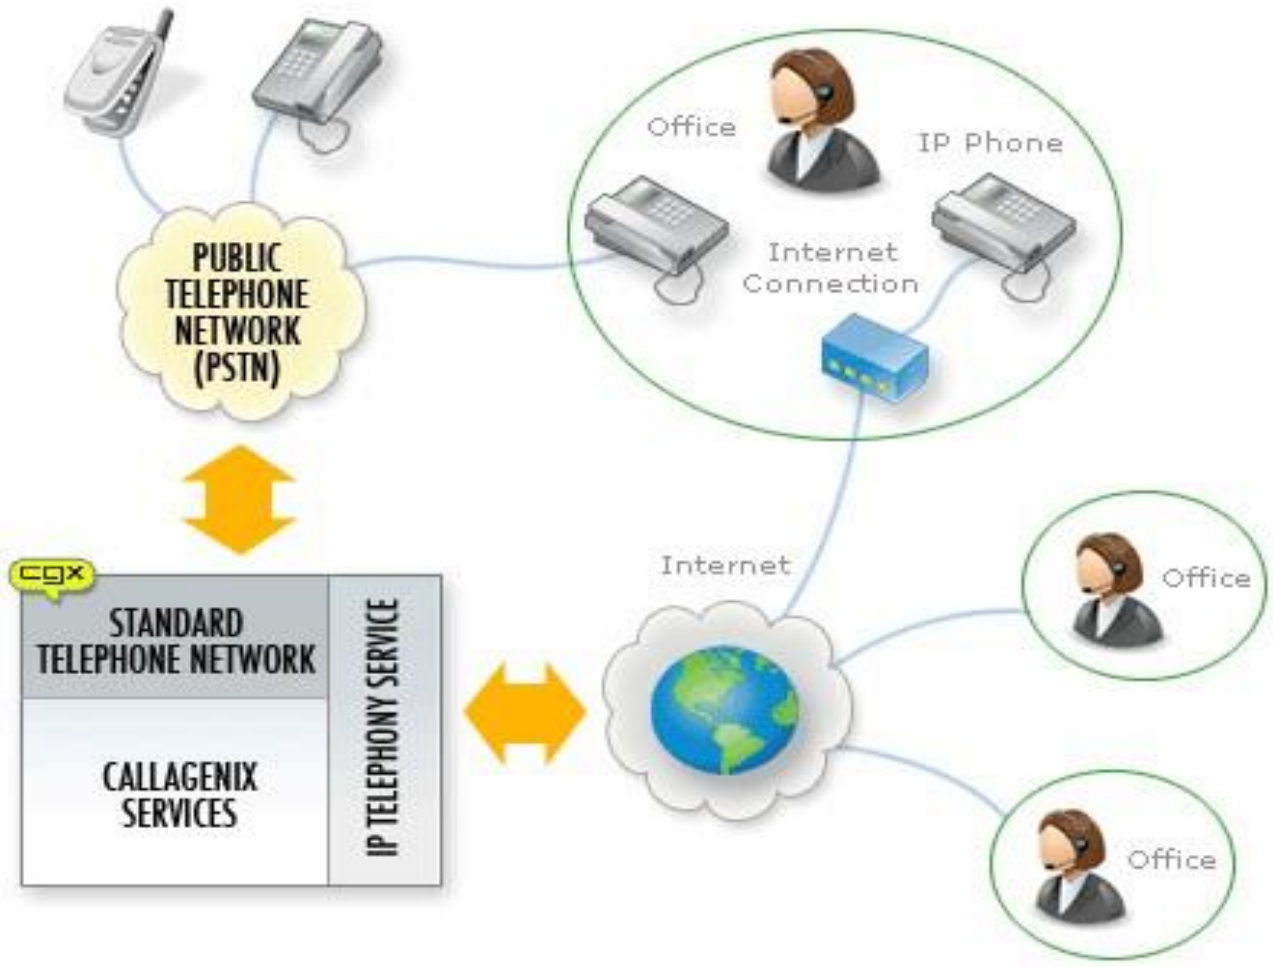

Though VITL combine this technology to its product line- within a short time we fashioned a strong existence in hospitality market. Our Integration Element is an RFID Hotel Lock allows you to integrate all your physical security needs into one stylish, energy efficient, reliable wire-free system. The minimalistic design of its RFID reader looks stylish and discreet on any. It can also be combined with a wide range of designer handles. Incorporating new DNA technology, A element enables users to choose between the on-line and off-line world as all hotel locks are designed to be “wireless ready” right out of the box, users simply choose the mode of operation they want “Wireless on-line” or “Wireless ready”.

“Wireless on-line” locks are on-line and communicate in real time providing real time control over an entire property. Wireless ready locks can be ‘switched’ to real time on-line mode at any time. Just plug in the USB-sized RF communication antenna and you are ready to go. It operates on a 2.4GHz wireless network and works with every popular mainstream RFID technology including Mifare, Mifare Plus, Desire and Desire EV1. Our Hotel Lock system also can be integrated with back office access control system. Our HAMS (Hotel Access Management Software) in order to provide an extremely useful tool for the control of hotel access and guest management. HAMS is suitable for small projects controlling 10 rooms up to large resort based properties controlling thousands of rooms. Both guest rooms and back of house doors are managed in one system and HAMS can control both off line and on line units centrally. The software is network Ready and can be installed on as many PC work stations as required. Also our HAMS can be integrated with al popular Hotel Management software like Fidelio, Opera and others. Also if it is some other PMS we can integrate with them easily.

Data & System Networking

Network architecture is the design of a communication network. It is a framework for the specification of a network's physical components and their functional organization and configuration, its operational principles and procedures, as well as data formats use. This concept was brought by Shreya's Dhaka In telecommunication, the specification of a network architecture may also include a detailed description of products and services delivered via a communications network, as well as detailed rate and billing structures under which services are compensated.

The network architecture of the Internet is predominantly expressed by its use of the Internet Protocol Suite, rather than a specific model for interconnecting networks or nodes in the network, or the usage of specific types of hardware links

OSI Network Model

Video Conference System

Now, you can experience business quality connections by integrating video conferencing capabilities in every collaboration interaction. As the workforce becomes more mobile and distributed, leaders recognize the benefits and growing impact of video conferencing as a key part of collaboration. Video is becoming more pervasive as a business tool. Case in point: Now that most desktop and mobile devices have cameras, nearly anyone can join online meetings and do video conferencing. Use video conferencing to improve communications, relationships, and productivity by helping people meet faceto-face over distance. This helps you:

- **-Improve decision making by reducing communications delay**
- **-Build trust and understanding across cross-functional and diverse teams**
- **-Reduce employee travel, real-estate costs, and environmental impact**
- **-Encourage knowledge sharing with employees, partners, and customers**

Locker locks

Our electronic locker locks are designed to provide a high level of security protection and control access to a wide range of lockers, cupboards, display cabinets, boxes, cases and more. i-Locker solutions both feature an ergonomically designed twist operated locking handle makes for easy use, even with wet hands, and their durable wipe clean construction makes them highly resistant to chemicals; UV radiation and physical wear and tear ensuring a long lasting, smart appearance. On both models the battery pack, electronic components and locking mechanism are all located on the inside of the door, safe from potential vandalism or sabotage.

FOCUSED WORKING AREA IN BANGLADESH

VITL Primarily focuses on the following segments in Bangladesh. However, owing to the changing nature of business the focus area may often shift or change.

- **Banking and Non-Banking Financial Institutes**
- **Telecoms**
- **Local Conglomerate**
